Introduction to ProjectLibre

- ProjectLibre is a project management software program, which is designed to assist a project manager in developing a plan, assigning resources to tasks, tracking progress, managing the budget, and analysing workloads.
- ProjectLibre can be used in a variety of industries including construction, manufacturing, pharmaceuticals, government, retail, financial services and health care.
- ProjectLibre is a software application that provides project management tools to manage projects. The program, which has many different versions, allows users to:
 - Understand and control project schedules and finances.
 - Communicate and present project information.
 - Organize work and people to make sure that projects are completed on schedule.

Features-

- Project creates **budgets** based on assignment work and resource rates. As resources are assigned to tasks and assignment work estimated, the program calculates the cost, equal to the work times the rate, which rolls up to the task level and then to any summary tasks and finally to the project level.
- Each resource can have its own **calendar**, which defines what days and shifts a resource is available.
- Each resource can be assigned to multiple tasks in multiple plans and each task can be assigned multiple resources, and the application schedules task work based on the resource availability as defined in the resource calendars.
- All resources can be defined in label without limit. Therefore, it cannot determine how many finished products can be produced with a given amount of raw material.

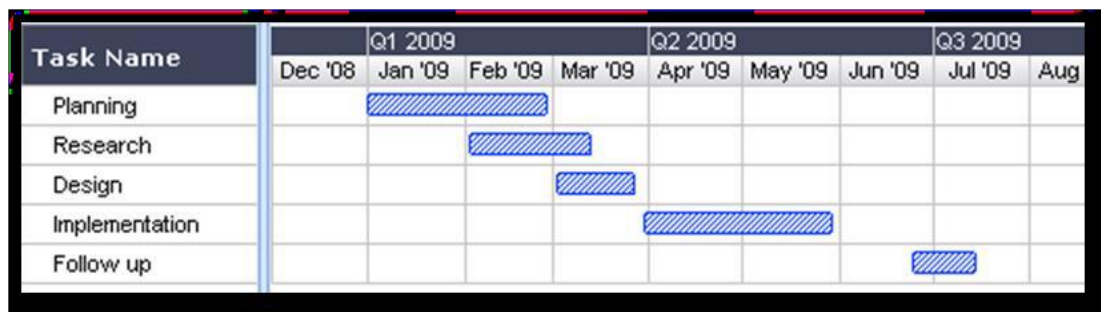

Project Libre is an open-source software. Download link is given below:

Introduction to Gantt Chart

- A Gantt chart is one of the most popular and useful ways of showing activities (tasks or events) displayed against time. On the left of the chart is a list of the activities and along the top is a suitable time scale. Each activity is represented by a bar; the position and length of the bar reflects the start date, duration and end date of the activity.
- Gantt charts illustrate the start and finish dates of the terminal elements and summary elements of a project. Terminal elements and summary elements comprise the work breakdown structure (WBS) of the project.
- This allows you to see at a glance:
 - What the various activities are
 - When each activity begins and ends
 - How long each activity is scheduled to last
 - Where activities overlap with other activities, and by how much
 - The start and end date of the whole project

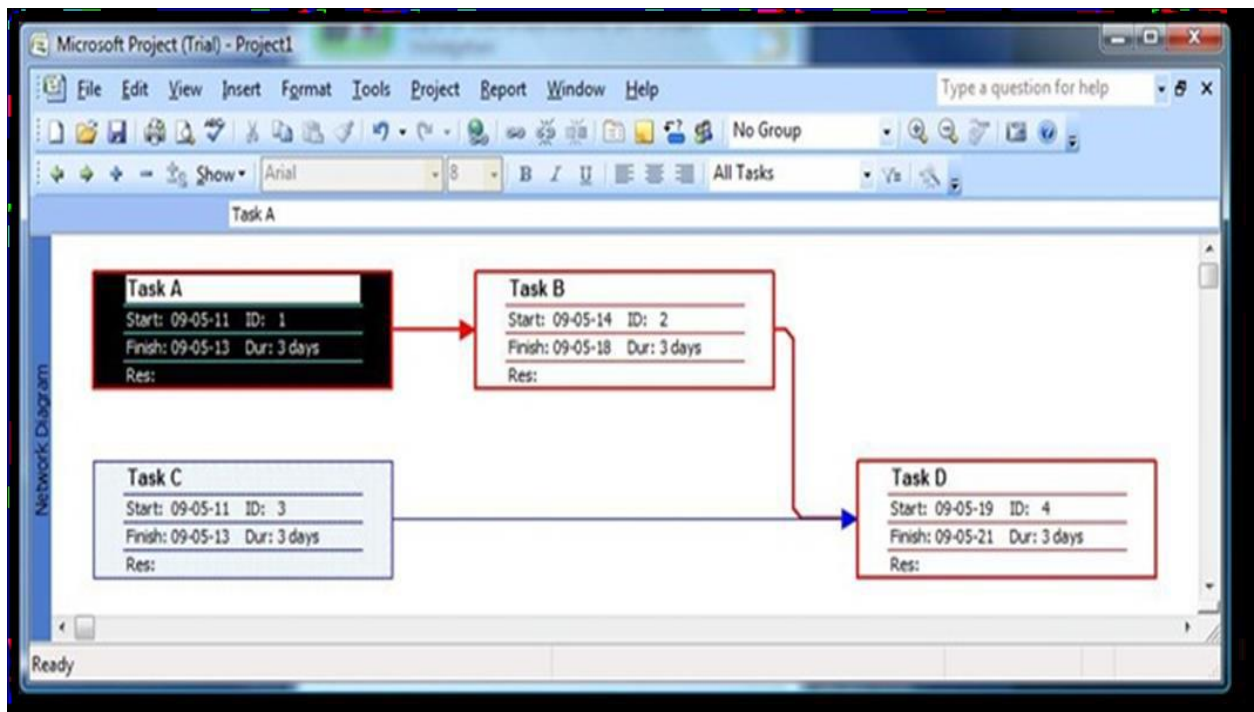

To summarize, a Gantt chart shows you what has to be done (the activities) and when (the schedule).

Sample of Gantt chart

Introduction to Network Diagram

- The Network Diagram view was called the PERT Chart in earlier versions of Project. This view shows the dependencies between tasks in a graphical manner.
- Gantt chart is primarily meant to view the schedule time line, whereas Network diagram to view the all type of dependencies in the project.
- Each task shown in the box called node and a line connecting two boxes represents the dependency between those tasks. You can also create new tasks in the Network Diagram.

Sample of Network Diagram

Step1: Create a New Project

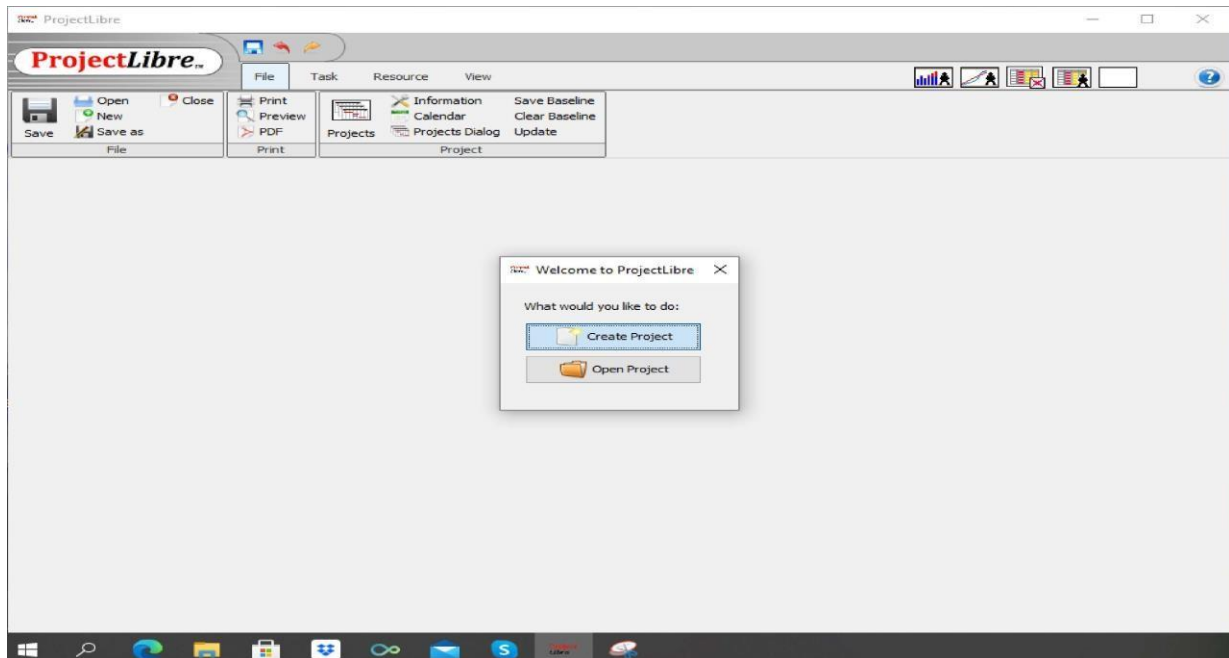

Figure 1:

Step-2: Fill the project details

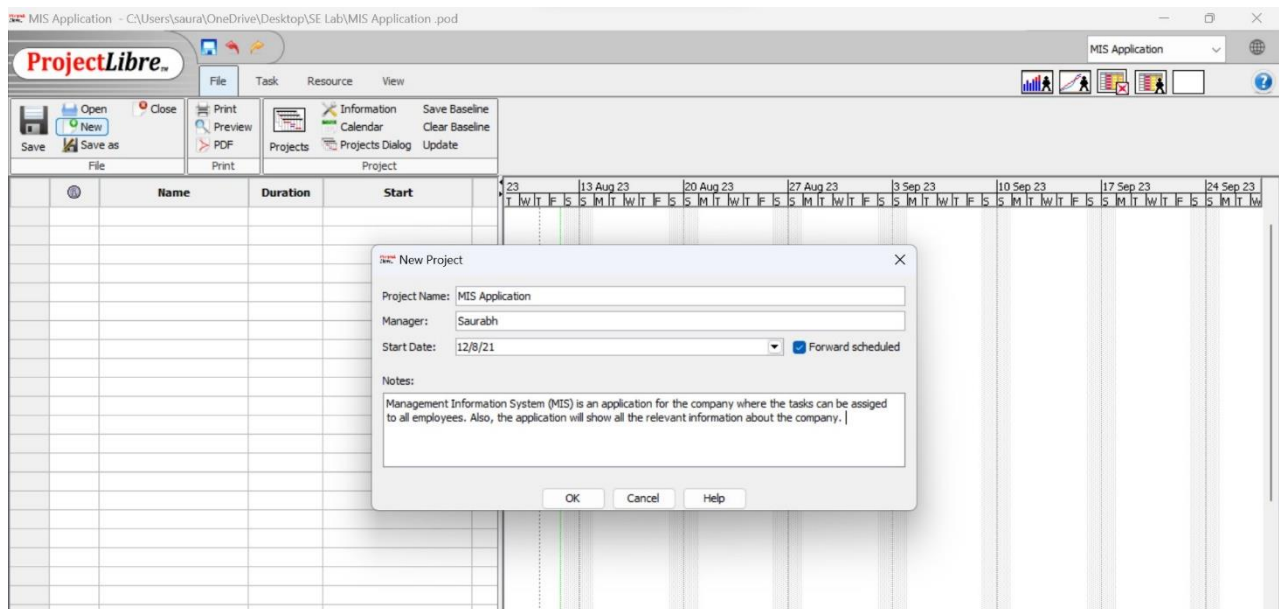

Figure 2

Step3: Empty work space and empty Gantt chart will appear

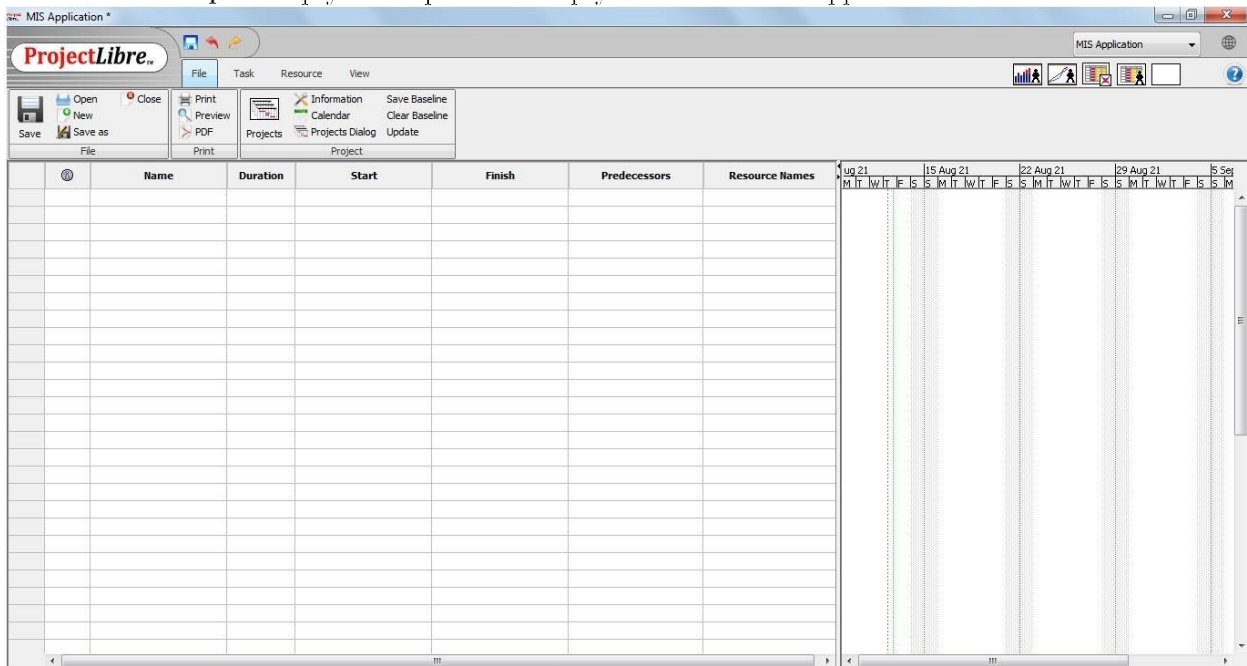

Figure 3:

Step4: Save the created project in any directory (.pod extension)

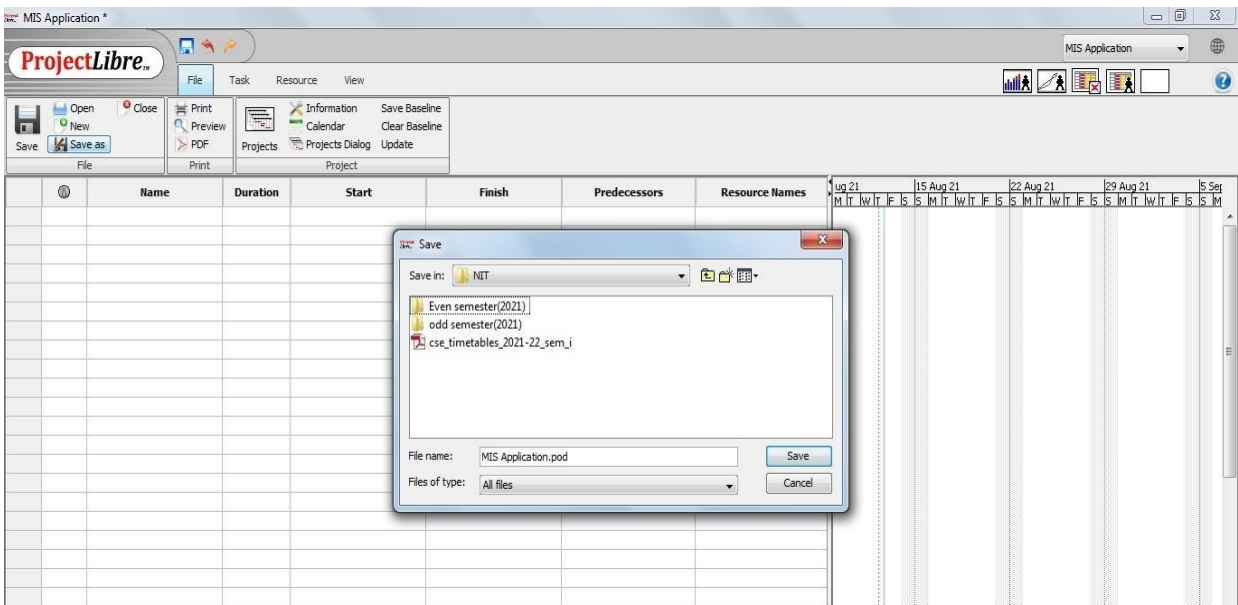

Figure 4

Step-5: Click on Information to see the current general information

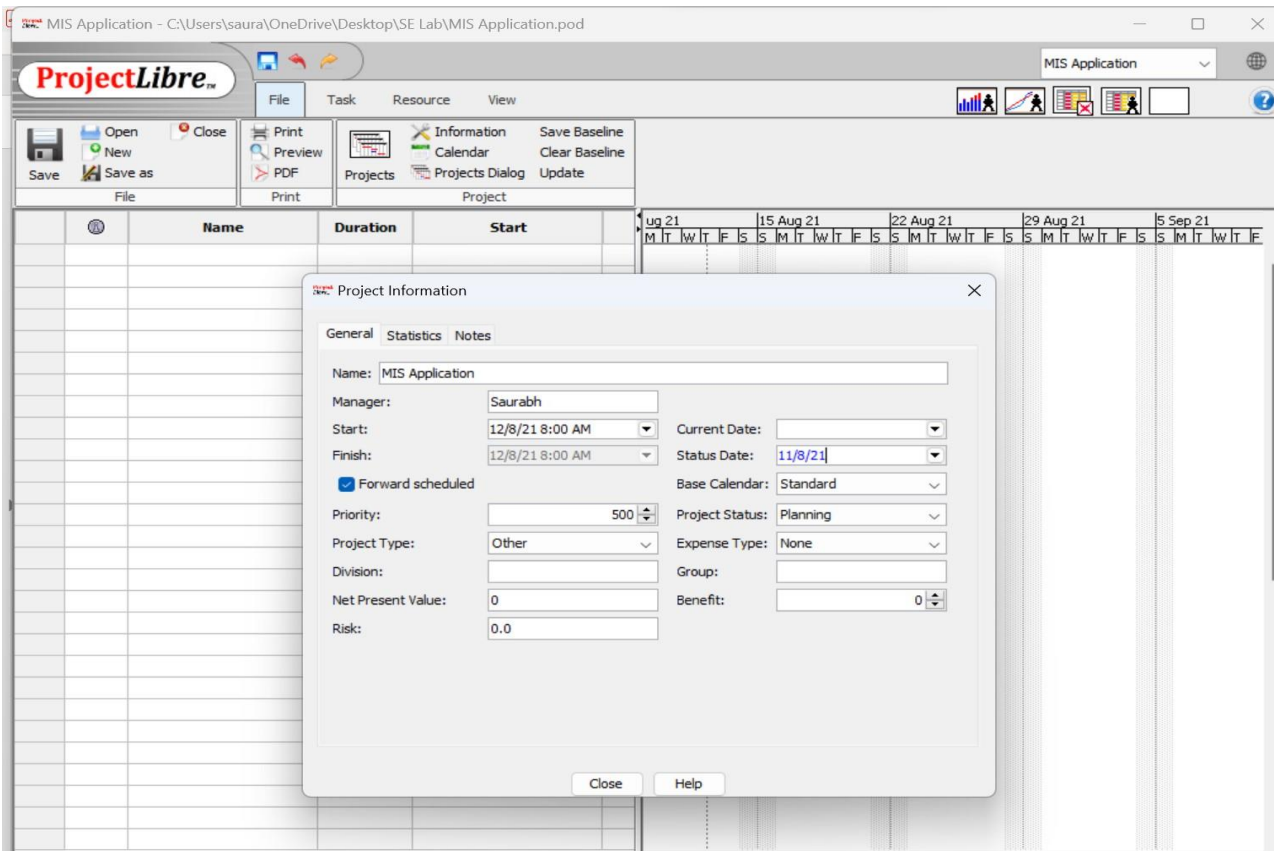

Figure 5

Step-6: Click on Statistics tab to see the current statistical information

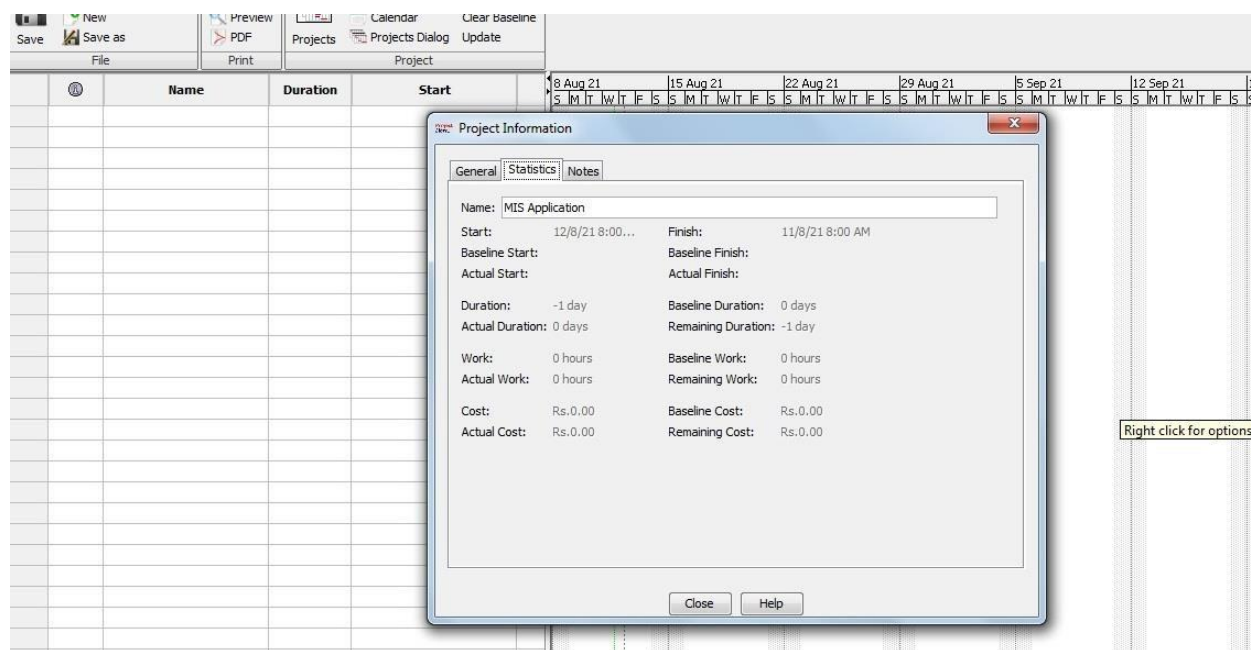

Figure 6

Step7: Click on notes to view the brief of project you entered

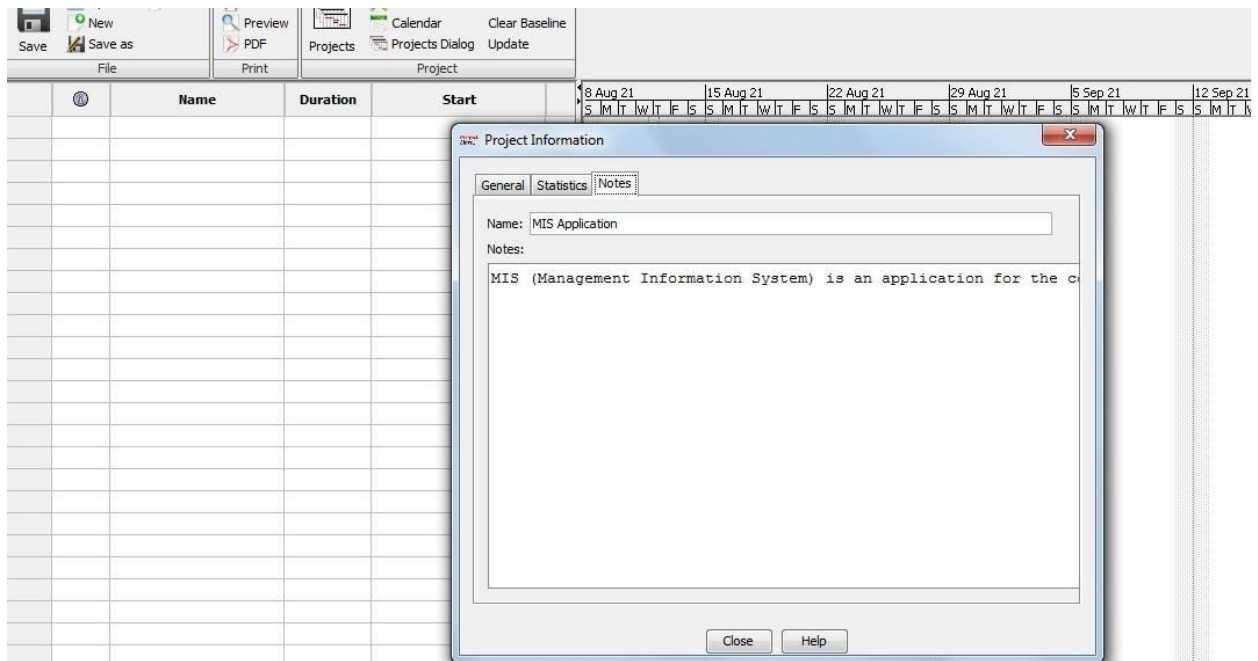

Figure 7:

Step8: Click on calendar to view the dates and to make changes

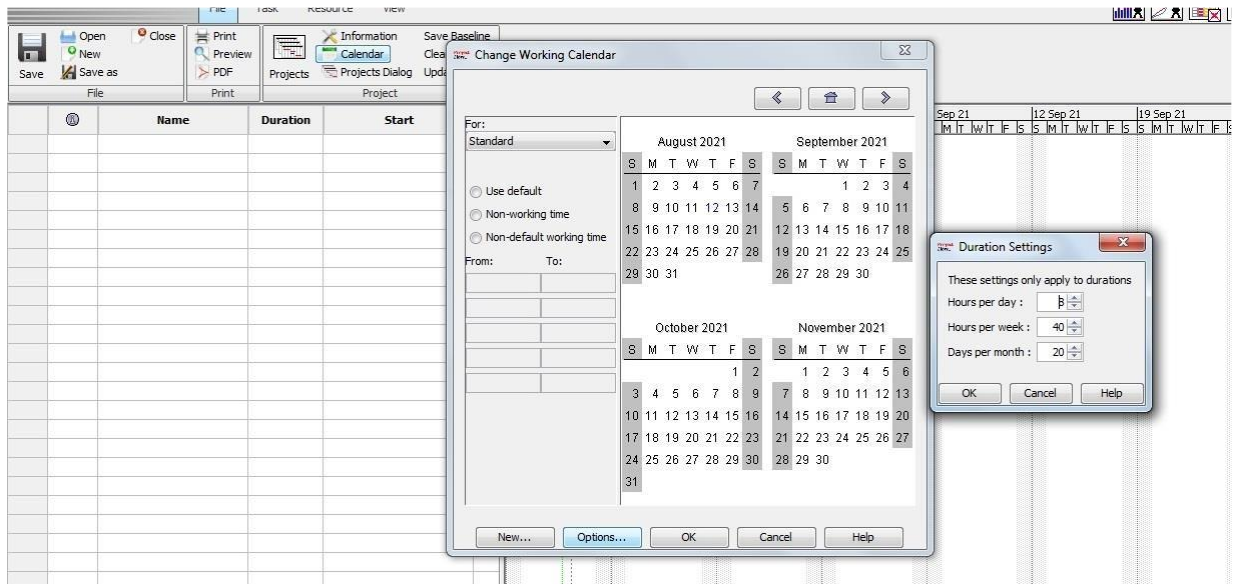

Figure 8

Step9: Click on Tasks tab to check all the options

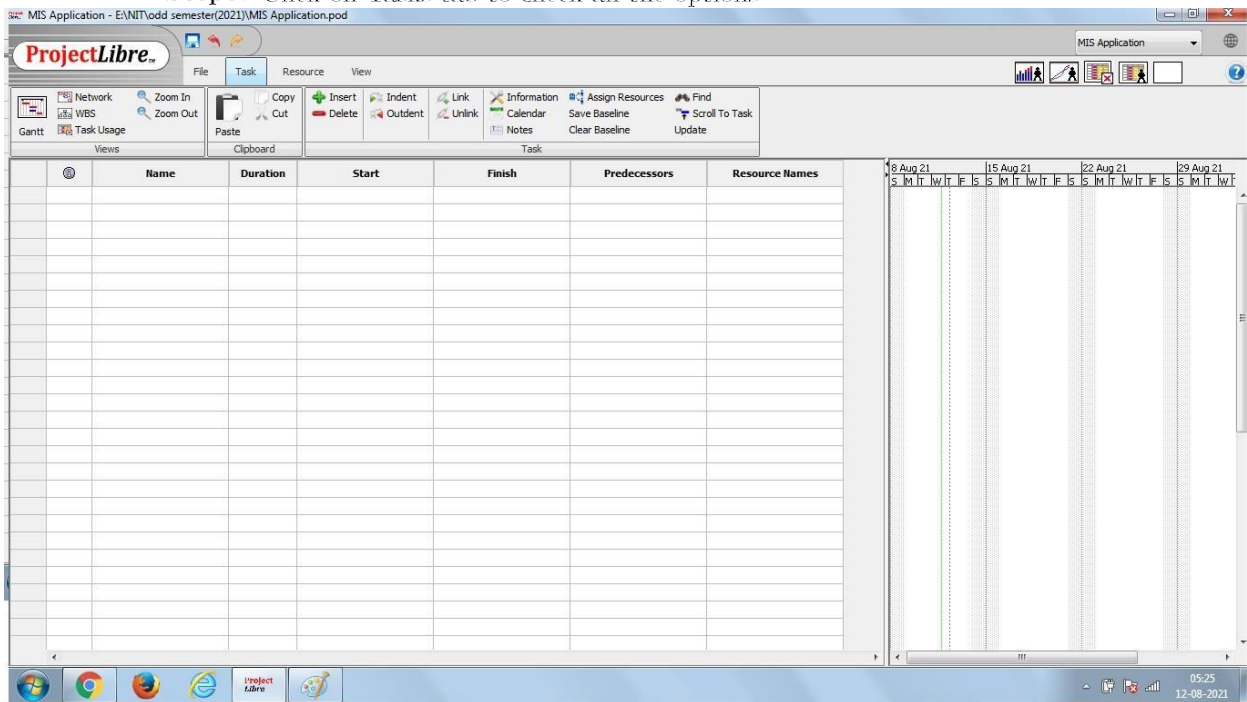

Figure 9:

Step10: Click on Resources tab to check all the options

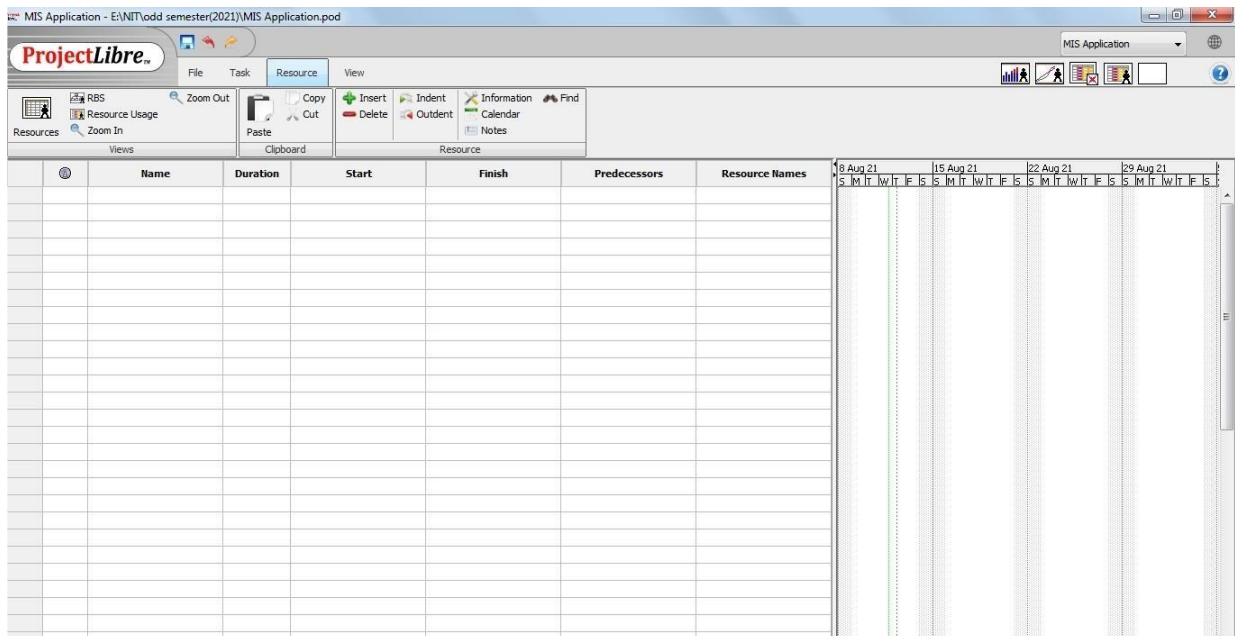

Figure 10

Step11: Click on View tab to see all the options

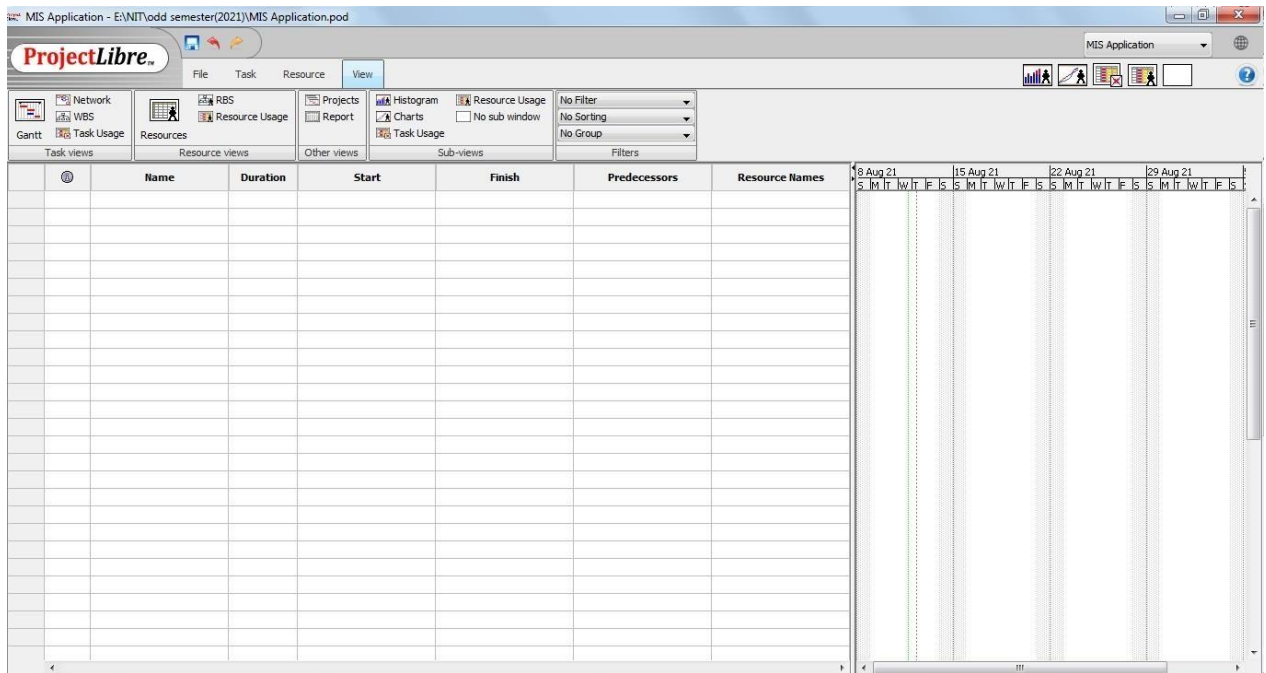

Figure 11:

Step12: Enter the tasks and durations with indentations and links

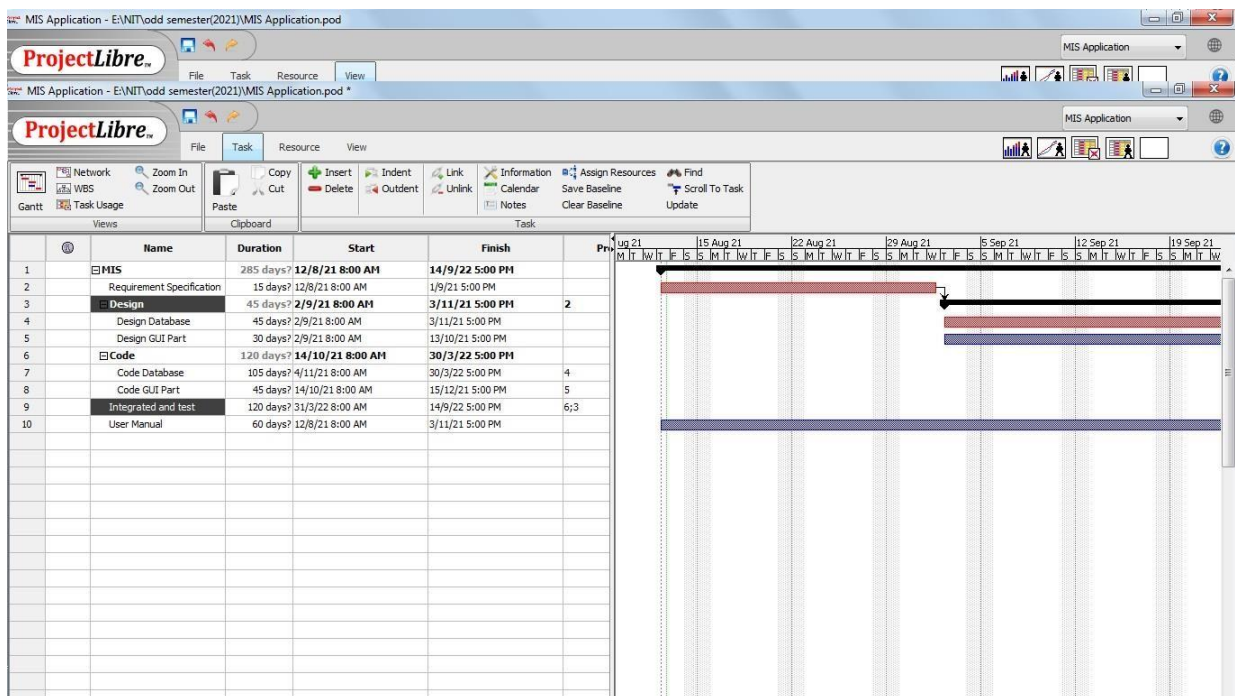

Figure 12

Step13: Click on black arrow as blue circle to see task dependencies

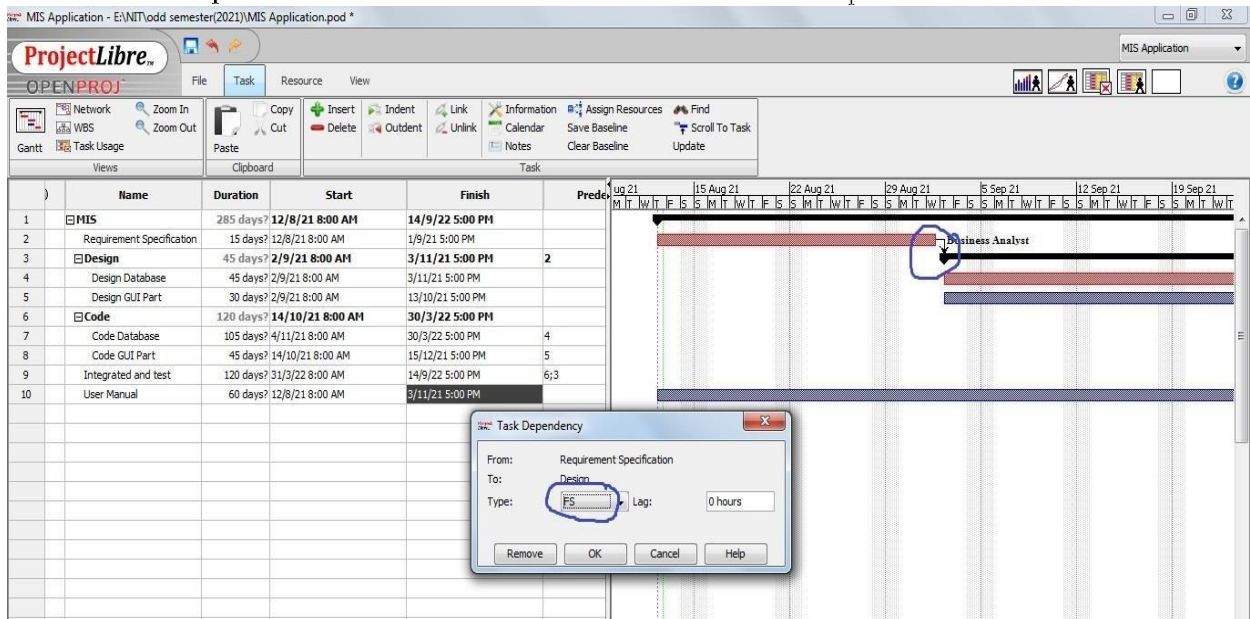

Figure 13:

Step14: Click on Resources tab and enter all resources

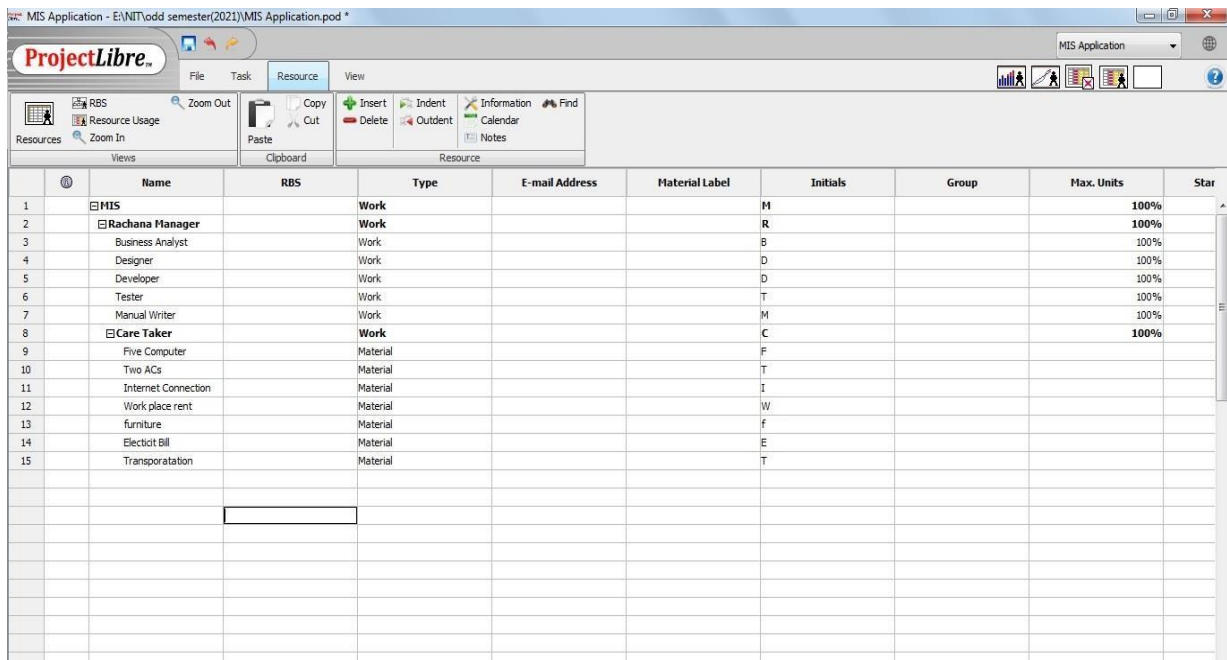

Figure 14

Step15: Enter all costs for entered resources

Step20: Task Usage

The screenshot displays the ProjectLibre interface with the Task Usage view selected. The table shows the following tasks and their usage details:

ID	Name	Work	Duration	Start	End	Resources
1	MIS	6,960 hours	285 days	12/8/21 8:00 AM	14/8/21 5:00 PM	Business Analyst
2	Requirement Specification	120 hours	15 days	12/8/21 8:00 AM	12/23/21 5:00 PM	Business Analyst
3	Design	960 hours	45 days	2/9/21 8:00 AM	3/17/21 5:00 PM	Designer
4	Design Database	360 hours	45 days	2/9/21 8:00 AM	3/17/21 5:00 PM	Designer
5	Design GUI Part	240 hours	30 days	2/9/21 8:00 AM	3/10/21 5:00 PM	Designer
6	Code	2,160 hours	120 days	14/10/21 8:00 AM	31/3/22 5:00 PM	Tester
9	Integrated and test	960 hours	120 days	31/3/22 8:00 AM	14/8/22 5:00 PM	Tester
10	User Manual	480 hours	60 days	12/8/21 8:00 AM	12/23/21 5:00 PM	Manual Writer
	Total	2,280 hours	285 days	12/8/21 8:00 AM	14/8/21 5:00 PM	Rachana Manager
